

1. Species abundance of N samples

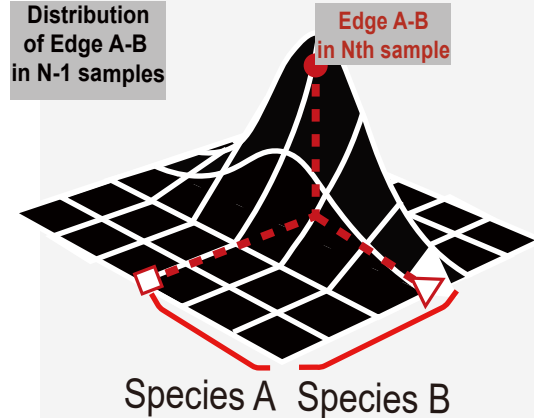

Species A
Species B
Species C

2. Deviation of two species from distribution of samples

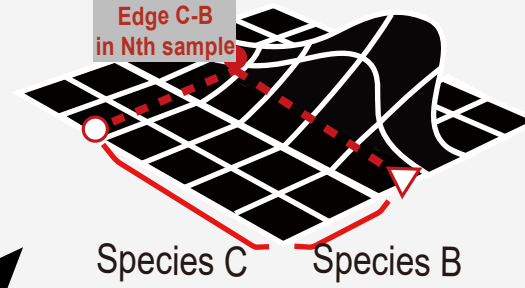

Distribution of Edge A-B in N-1 samples

Edge A-B in Nth sample

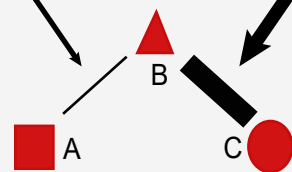

Distribution of Edge B-C in N-1 samples

Edge C-B in Nth sample

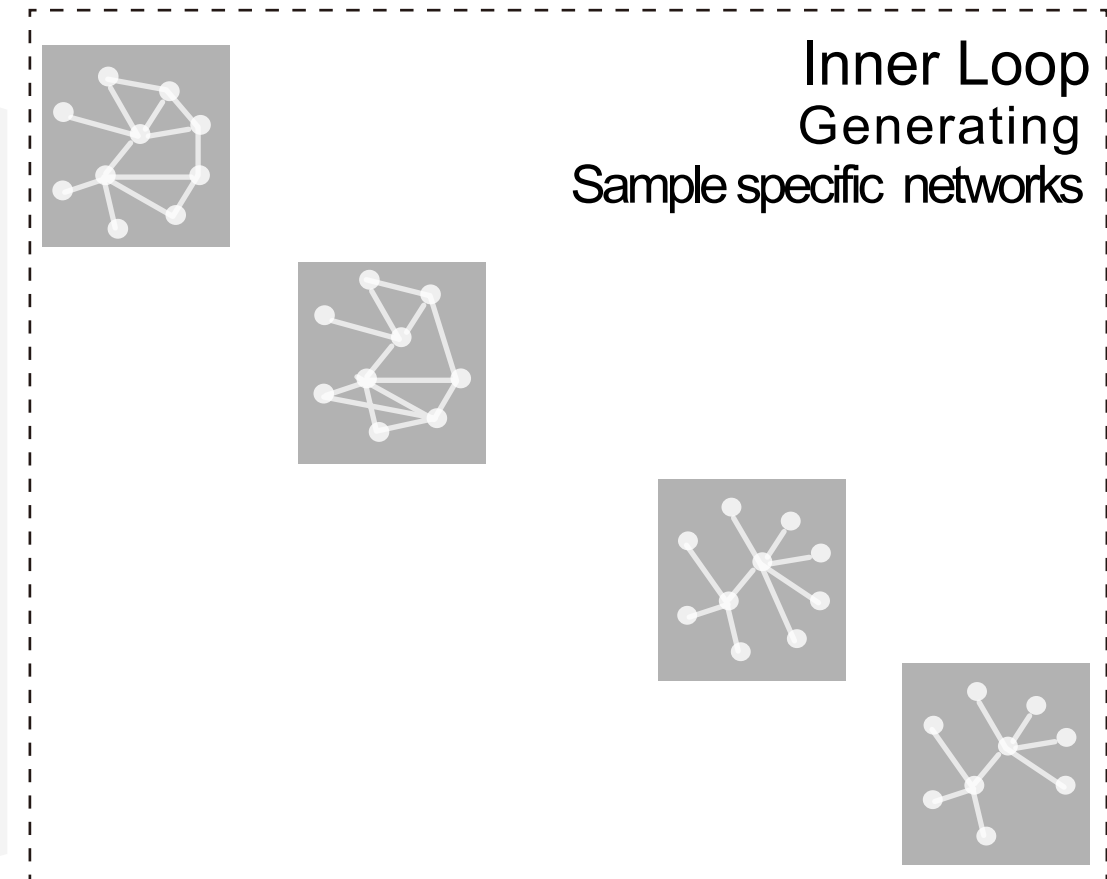

Small diviation

Large diviation

The greater the deviation indicates the greater edge weight

Extract node and network attributes

	Node attributes			Network attributes		
	Species A	Species B	Species C	Edge number	Node number	Mean degree
1						
2			...	...		...
N
